

Installation Guide Instructions

Shower Flow Regulators

FlowSmart™ Shower Flow Regulators

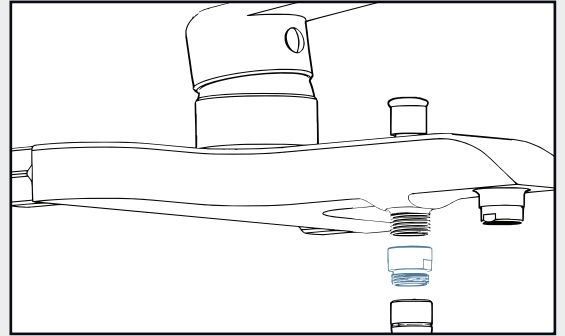

Where to Use: FlowSmart™ Shower Flow Regulators are engineered to conserve water while delivering a premium shower experience. Designed for compatibility with all R1/2" shower faucets and connection hoses, FlowSmart™ ensures easy installation and effective water-saving performance.

Capable of saving up to 50 liters of water per shower, FlowSmart™ reduces water usage by as much as 50%, while also cutting down on energy consumption for hot water. This eco-friendly product helps substantially lower both water and energy costs, minimizing environmental impact. By providing considerable water and energy savings without sacrificing comfort, FlowSmart™ is the perfect choice for sustainability and affordability. Shower flow regulators are color-coded to visually represent different flow rates.

Shower with Spiral Hose

Installation:

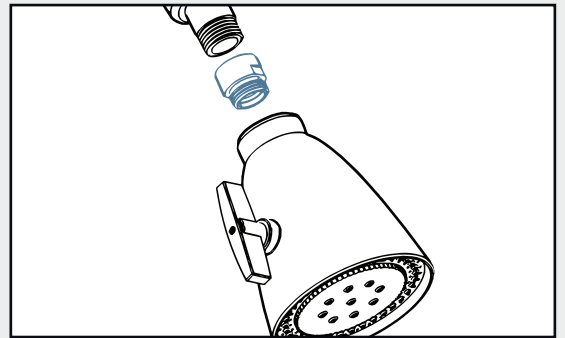

- Carefully remove the spiral shower hose.
- Install the FlowSmart™ shower flow regulator at the hose inlet connection.
- Attach the spiral hose onto the shower flow regulator.

Concealed Shower

Installation:

- Carefully remove the concealed shower head.
- Install the FlowSmart™ shower flow regulator at the pipe inlet connection.
- Attach the concealed shower head onto the shower flow regulator.

Overhead Shower

Installation:

- Carefully remove the overhead shower head.
- Install the FlowSmart™ shower flow regulator at the pipe inlet connection.
- Attach the concealed shower head onto the shower flow regulator.
